

Industrial CO2 Emission Prediction Report

Report Generated: 02-10-2026 20:07:44
Record Timestamp: 02-10-2026 20:07:28
Prediction Record ID: #61

Core Telemetry Parameters

Parameter	Observed Value
Energy Consumption	18.00 kWh
Production Count	96.00 Units
Working / Shift Hour	16:00 hrs
Manufacturing Schedule	Weekend Operation

Emission Forecast & Analysis

Forecasted CO2 Emission	15.05 kg CO2
Pollution Classification	Low
Inference Methodology	Random Forest Machine Learning Model
Grid Emission Constant	0.82 kg CO2/kWh

Recommended Mitigation Measures

- Continue monitoring industrial energy consumption.
- Maintain machines regularly for energy-efficient operation.
- Continue using high-efficiency motors and variable frequency drives.
- Monitor carbon emissions periodically against baseline.

This certification report was generated by the Industrial Carbon Emission Forecasting System. Telemetry input is evaluated using Scikit-Learn Machine Learning models and Scope 2 emission standards.
