

Industrial CO2 Emission Prediction Report

Report Generated: 17-09-2026 10:48:19
Prediction ID: 40

Input Parameters

Parameter	Value
Energy Consumption	2450.00 kWh
Temperature	96.00 °C
Humidity	96.00 %
Production Output	265.00
Working Hour	21
Weekend	Yes

Prediction Result

Predicted CO2 Emission	2009.00 kg CO2
Pollution Level	High
Prediction Method	Electricity Emission Factor (0.82 kg CO2/kWh)

Recommended Prevention / Reduction Measures

- Immediately investigate high energy consumption.
- Optimize machine utilization and operating schedules.
- Reduce unnecessary machine operation.
- Perform maintenance on high-energy-consuming equipment.
- Consider renewable energy sources such as solar power.
- Improve overall industrial energy efficiency.
- Monitor CO2 emissions more frequently.

This report was generated by the Industrial Carbon Emission Forecasting System using industrial energy and environmental input data.
